

## Managing Fecal and Urinary INCONTINENCE

Presented by Jeff Souza RN, BSN, WOCN  
with Capital Nursing Education

February 25, 2016

MEDICAL SUPPLIES FOR CARE AT HOME SINCE 1957

---

---

---

---

---

---

---

---

### About the Presenter

#### Jeff Souza RN, BSN, WOCN

- Became a Board Certified WOCN in 1983 after attending the Cosler School at the University of Southern California.
- Has served in leadership positions in both homecare and outpatient providers.
- A speaker, author and advocate for home and community medical care.
- With over 30 years of experience in the dynamic healthcare environment he brings the creativity needed to deliver services throughout the changing healthcare market.
- Currently enrolled at the Samuel Merritt University, School of Nursing, Family Nurse Practitioners Masters program.

---

---

---

---

---

---

---

### Objectives

1. Explain the difference between incontinence-associated dermatitis (IAD) and pressure ulcers (PU)
2. Describe the effect of excessive moisture on skin integrity
3. List three (3) types of urinary incontinence and describe one (1) possible intervention for each cause

Capital Nursing Education

3

---

---

---

---

---

---

---

---

## Definition

Incontinence is the involuntary loss of urine or feces of sufficient magnitude to comprise a problem for the patient or caregiver.

Wound, Ostomy, and  
Continence Nurses Society™

Capital Nursing Education

4

---

---

---

---

---

---

---

---

## Prevalence

Incontinence is one of the leading causes of institutionalism in the elderly

- **13 million** people in the USA suffer from UI
- Costs over **26 billion dollars** annually
- Prevalence of UI and FI **increases with age**
- Women affected **twice as often** as men

Capital Nursing Education

5

---

---

---

---

---

---

---

---

## Significance of Incontinence

- Suffering of the patient
- Prevalence of skin care problems across all care settings
- Cost to healthcare system

7

---

---

---

---

---

---

---

---

## Elements of Skin's Moisture Barrier

- Stratum corneum
- Lipid matrix: slows movement of water and electrolytes
- Water: hydrates corneocytes
- pH: (usually 5.0-5.9) forms an acid mantle
- Temperature: regulates permeability
- Bacterial flora: competes with pathogens to prevent infection

8

---

---

---

---

---

---

---

---

## Effects of Moisture on Skin

- Maceration
- Incontinence Dermatitis
- Bacterial Infection
- Exposure To Caustic Agents
- Fungal Infection

Capital Nursing Education

9

---

---

---

---

---

---

---

---

## Normal Micturition

- Normal - 3-4 hours/day & 1 x/noc
- Abnormal - voiding interval of  $\leq 2$  hours or  $\geq 8$  voids/day
- Bladder stores urine (500-700 cc)
- Complex series of events

11

---

---

---

---

---

---

---

---

## Stool Frequency & Characteristics

**Frequency:** Highly individual from 1-2/day to one movement every 3-4 days

### BRISTOL STOOL SCALE

Type I Stool		Small hard lumps; pellet-like in appearance
Type II Stool		Hard sausage shaped lumps
Type III Stool		Sausage-like but with cracks on the surface
Type IV Stool		Smooth, soft and formed
Type V Stool		Soft formed pieces
Type VI Stool		Mushy, puffy, ragged pieces and edges
Type VII Stool		Liquid with no formed pieces

Fecal incontinence may occur with any type of stool, but is often associated with increased fluidity.

17

---

---

---

---

---

---

---

---

## GOALS

### of Perineal Skin Care

- Skin to be clean
- Skin to have minimal exposure to irritants

Capital Nursing Education

©2016. All rights reserved.

18

---

---

---

---

---

---

---

---

## CLEANSE the skin

When frequent bathing necessary, current evidence suggests...

- Gentle cleansing: **NO scrubbing**<sup>1</sup> -----
- pH close to acid mantle of skin (5.5)
- minimize potential irritants, scents, etc.
- Towel drying has been found to compromise moisture barrier, consider no-rinse formulation for frequent bathing<sup>2</sup>
- Surfactants, used to remove dirt and bacteria, can also increase transepidermal water loss<sup>3</sup>

Capital Nursing Education

©2016. All rights reserved.

19

---

---

---

---

---

---

---

---

## Skin Care Products

### Moisture Barriers

- **Skin sealants** (solvent with a polymer)
  - Alcohol based
  - “No Sting” available for denuded skin
- **Spray**
- **Lotion** (thinner; increased ratio of water to oil)
- **Cream** (oil based)
- **Paste** (ointments with fine powder added)
- **Ointment** (emulsified oil in water)

Capital Nursing Education

©2016. All rights reserved.

20

---

---

---

---

---

---

---

---

## MOISTURIZE the skin

- **Emollients**
  - Usually oils
  - Makes skin soft and smooth
- **Humectants**
  - Glycerin, urea
  - Actively binds the available water in the epidermis
- **Occlusive skin conditioners**
  - Petrolatum, mineral oil, paraffin
  - Coats epidermis to prevent evaporation

Capital Nursing Education

21

---

---

---

---

---

---

---

---

## PROTECT with Skin Protectant

### • Skin protectants should

- Act as a “moisture barrier”, protecting skin from deleterious effects of exposure to irritants and excess moisture
- Maintain hydration and favor skin’s normal transepidermal water loss (TEWL)
- Avoid maceration when left on for prolonged period of time

Capital Nursing Education

©2016. All rights reserved.

22

---

---

---

---

---

---

---

## Types of Skin Protectants

- **Petrolatum:** Blend of castor seed oil and hydrogenated castor oil

- **Dimethicone:** Silicone based oil

- **Zinc Oxide:** White powder, mixed with cream or ointment based

Capital Nursing Education

©2016. All rights reserved.

23

---

---

---

---

---

---

---

## Comparison of SKIN PROTECTANTS

### Petrolatum:

- Good protection against irritant
- Avoided maceration
- Poor skin hydration

### Dimethicone:

- Variable protection against irritant
- Avoided maceration
- Good skin hydration

### Zinc Oxide:

- Good protection against irritant
- Did not avoid maceration
- Poor skin hydration

Capital Nursing Education

24

---

---

---

---

---

---

---

## All-in-One Products

- These **clean, moisturize, and protect** in one step application
- Available as cloths and spray-on applications
- When placed at bedside, reduces process to simple, single step
  - ↓ time needed by staff to apply
  - ↓ discomfort for patient caused by rubbing and wiping during procedure

Capital Nursing Education

28

---

---

---

---

---

---

---

---

## Incontinence-Associated Dermatitis

- **Severe IAD** — "Affected skin is red with denuded areas (partial-thickness skin loss) and oozing/bleeding. Skin layers may be stripped off as the oozing protein is sticky and adheres to any dry surface."

31

---

---

---

---

---

---

---

---

Catheters and pads  
are **not the first and  
only treatment**  
for incontinence.

They should only be used to make other treatments  
more effective or when other treatments have failed.

32

---

---

---

---

---

---

---

---

### Containment DEVICES

#### • External devices

- Absorbent products (pads, shields, briefs)
- Containment devices (urinals, commodes, external collection pouches)

#### • Internal devices

- Suprapubic catheters
- Indwelling urinary catheters
- Fecal management systems

---

---

---

---

---

## Product TECHNOLOGY

- 1960 → **Disposable incontinence containment** first introduced
- 1984 → Development of **super-absorbent materials** using sodium polyacrylates in infant diaper market (Campbell)
- 1987 → **Gelling material superior to cloth** and non-gelling disposable diaper materials in pH control of the skin and the severity of diaper dermatitis (Campbell)
- 1997 → **Design** (rather than the amount of materials used) improved skin barrier function (Akin and colleagues)
- 1997 → How **super-absorbent materials were layered** (not amount of polyacrylate) was key factor in maintaining skin barrier function

---

---

---

---

**Incontinence Pads, Protective Undergarments & Adult Diapers**

Light Moderate PROTECTION Heavy Extra

**Pads for Women or Men**  
Use in regular underwear, sleep, day & night wear

**Liners**  
Larger pads w/ Lycra leg gaskets to reduce leaks

**Belted Undergarments**  
Liner w/ adjustable velcro straps

**Pull-On Style Adult Diapers**  
Crotch-like disposable undergarment

**Fitted Briefs**  
Superabsorbent w/ waterproofable leak

**Overnight Fitted Briefs**  
Extra absorbency built through the night

**Products for Extra Care & Protection**

**Washable Underwear**  
Cotton underwear w/ waterproofing for leaks

**Booster Pads**  
Extends life of pad area & blood leaks

**Underpads**  
Bed Pads & Chair, Disposable & Washable

**Personal & Skin Care**  
Skin, Body & Perineal Care Products

**Wipes & Tissues**  
Large size wet wipes w/ aloe, dry wet/wet/dry & tissues

**Exam Gloves**  
Lightly powdered

38

---

---

---

---

---

---

---

---

## OTHER CONSIDERATIONS...

- ✓What is it made of?
- ✓Is it going to leak?
- ✓Does it fit the patient?
- ✓Does it control odor?
- ✓Does it control fecal incontinence?
- ✓How well do these products wick the urine away from the skin?

Capital Nursing Education

39

---

---

---

---

---

---

---

---

## Other Methods | URINARY CONTAINMENT

### Male (non-invasive)

- Condom caths
- Retracted penis pouches
- Penile clamps

### Female (non-invasive)

- External urinary collection device

- Invasive-Intravaginal support devices (cones, pessaries)

Capital Nursing Education

40

---

---

---

---

---

---

---

---

## Management Program for Incontinence

### Needs to include:

- Dietary and fluid management
- Bowel training or stimulated defecation program
- Bladder retraining
  - Prompted voiding
  - Scheduled voiding program
- Indwelling catheter management
- Intermittent catheterization program
- Pelvic muscle reeducation
- Containment or absorptive devices
- Skin care regime

Capital Nursing Education

©2016. All rights reserved.

41

---

---

---

---

---

---

---

---

## How Can We Help the Incontinent Patient?

- Assessing their need
- Toileting every 2 hours
- Giving them reassurance and confidence
- Be empathetic!!
- Provide them with familiar products...those they use at home, when possible
- Make them comfortable
- Work as a team with the patient to make this a less burdensome issue

Capital Nursing Education
